International application No.

PCT/AU2004/000490

Box No. V	Reasoned statement under Auticle 25(2)	
citation	Reasoned statement under Article 35(2) with regard to not and explanations supporting such statement	ovelty, inventive step or industrial applicability:
	ons and explanations supporting such statement	

1,	Statement .		•
	Novelty (N)	Claims 1-16	YES
	•	Claims	NO
	Inventive step (IS)	Claims 1-16	YES
-	Industrial applicability (IA)	Claims	NO
	induction application (IA)	Claims 1-16 Claims	YES
	Citations and evaluations (D. 1. 70.7)		NO .

2. Citations and explanations (Rule 70.7)

The International Search Report identified the following citations:

- D1) AU 43870/00
- D2) Derwent Abstract Accession No. 26921 K/11
- D3) Derwent Abstract Accession No.1981-89192D/48
- **D4)** GB 1,121,683
- D5) STN File CA, Abstract 139:399976
- **D6)** WO 2001/046204
- D7) GB 2 227 662

Citations D1-D5 are the most relevant.

None of the citations teaches or fairly suggests the preparation of phosphorylated derivatives of pravastatin, atorvastatin, venlafaxine or mixtures thereof.

Accordingly, Claims 1-4, 6, 13, 14 and their dependent claims 15-16 are novel and involve inventive step in light of the citations.

Claims 5 and 12 relate to a process for phosphorylating secondary alcohols and the product of that process wherein the process involves reacting the secondary alcohol with  $P_4O_{10}$  in the presence of an alkali salt of a fatty acid. The problem faced by the inventor of the present application is to overcome the disadvantage associated with previous methods used to phosphorylate secondary alcohols, namely that of a significant degree of dehydration of the secondary alcohol to form a double bond (page 4 lines 13-15). And the inventor proffered the solution of the use of an alkali metal salt of a free fatty acid. Suitable alkali metal salts of fatty acids include the sodium and potassium salts of oleic or valeric acid.

None of D1 to D5 discloses the use of an alkali metal salt of a fatty acid.

Accordingly, Claims 5 and 12 and their dependent claims are novel and involve inventive step in the light of D1 to D5.

The phosphate and phosphate complex derivatives of the invention are pharmaceuticals with improved characteristics. Accordingly, the claimed subject matter has industrial applicability.
